

Software Access Guide

1. Standard Software List

All corporate laptops come pre-installed with standard software, including Microsoft Office 365, Google Chrome, Adobe Acrobat Reader, and Cisco AnyConnect VPN.

2. How to Request Access to New Software

If a specialized tool is required for your role, submit a "Software Request" ticket via ServiceNow. Ensure you provide a clear business justification.

3. Approval Workflow

Software requests follow a two-tier approval workflow:

- **Tier 1:** Line Manager approval (for cost center allocation).
- **Tier 2:** IT Security approval (for compliance and risk assessment).

4. Installation Instructions

Once approved, software can be self-installed using the "Company Portal" application on Windows or "Self Service" on macOS. Admin credentials are not required for approved applications.

5. Licence Policy

Software licenses are strictly monitored. Unused software licenses (inactive for >90 days) will be automatically revoked to manage IT costs.
